

● Individual Data Points
 -.- Optimal Threshold: 72.93
 ■ MC Median (95% CI)

The figure displays two box plots side-by-side, representing the distribution of a variable for two groups. The left group is represented by a light gray box, and the right group by a dark gray box. Both boxes show the median (horizontal line inside the box), the interquartile range (the box itself), and the 95% confidence interval for the median (the whiskers). Individual data points are overlaid as small gray circles. A horizontal dashed line across both plots indicates the optimal threshold at 72.93. The right group shows a higher median and greater variability than the left group. Below the main plot area, there are several individual data points plotted as small gray circles, some of which are open circles, possibly indicating outliers or specific data points of interest.

Healthy (N=13)
