

Box plot showing the distribution of the number of children for two groups: 'No children' (light gray) and 'At least one child' (dark gray). The y-axis represents the 'Number of children' (0 to 10). A horizontal dashed line indicates the optimal threshold at 71.47. The 'At least one child' group shows a significantly higher median and greater variability compared to the 'No children' group. The legend identifies individual data points, the optimal threshold, and the Monte Carlo median with 95% confidence interval.

Healthy (N=13)
